ABOUT ISCOPE

CERTAINTY, BUILT INTO EVERY STAGE

Founded in Mackay in 2017, iScope has grown from a specialist welding inspection business into an integrated structural integrity, welding quality, repair coordination and workforce capability partner for Australia's mining and heavy industries.

From its purpose-built Paget headquarters and training facility, the team supports asset owners, mine sites, ports, maintenance teams, OEMs and repair vendors across Queensland, New South Wales and beyond. iScope combines hands-on trade experience with specialist technical expertise, bridging engineering intent, field conditions and practical delivery.

INDEPENDENCE

iScope does not undertake the physical repair work. Repairs are completed by the asset owner's selected repairer. iScope remains the independent technical representative for scope clarity, repair governance, surveillance, evidence review and outcome verification.

WHAT WE DO

ONE CONNECTED APPROACH

Scope | Manage | Repair | Train is a closed-loop model. Inspection findings shape the repair plan. Repair performance shapes future monitoring. Lessons learned strengthen procedures and training.

SCOPE

Establish true asset condition through inspection, measurement, defect mapping, 3D scanning, NDT review and repair SOWs.

MANAGE

Independent project coordination, vendor oversight, surveillance at Hold Points, variation control and reporting.

REPAIR

Governed methodologies, qualified procedures, acceptance criteria and verified close-out evidence. Physical repair stays with the selected repairer.

TRAIN

Practical and technical capability to complete critical welding work safely, consistently and to the applicable requirements.

INSPECT & MONITOR

On/off-site condition assessments, UT thickness and hardness, NDT review, photographic records and monitoring programs.

SCOPE & PACKAGE

Component-specific SOWs, materials, WPS, NDT stages, drawings, scan data and tender clarification.

GOVERN THE REPAIR

Before, during and close-out QA — on-site support and off-site vendor oversight, ITP, Hold Points and MDR review.

QUALIFY THE WORK

pWPS/WPS development, WPQR packages, welder qualification, and procedures for fatigue-sensitive and restricted-access work.

Work is planned to the applicable contract, OEM and engineering requirements, including AS/NZS 1554.1/.4/.5, AS 1796, AS/NZS 5131, ISO 9606-1, ISO 14732, ISO 3834-2, ISO 5817, ISO 17637 and ISO 17640.

CAPABILITY

CAPABILITY THAT HOLDS UP IN THE FIELD

TRAINING

Theory, practical assessment and records delivered together at Paget, so North Queensland crews don't travel to larger centres.

- Theory training and knowledge assessment
- Practical coaching, testing and witnessed qualification
- Boom Welder training on Chord and Lacing assemblies
- Restricted-access and field-representative practice
- 540+ welders qualified

QUALITY, ASSETS & FACILITY

Certified to ISO 9001, ISO 14001 and ISO 45001 (March 2026).

- Excavator, dragline and loader buckets
- Shovel dippers, doors and aprons
- Truck trays and chassis; dozer and grader blades
- Fixed plant, bins, chutes and TLO structures
- Head office, classrooms and welding bays at Paget

WHY ISCOPE

- Independent of the companies completing physical repairs
- Practical trade experience with specialist welding qualifications
- Inspection, scope, QA/QC, training and records in one model
- Component-specific requirements, not generic templates
- Clear reporting and the authority to escalate non-compliant work
- Knowledge retained across assets, projects and repair cycles
